

FL Capstone — How I Will Add My Next Case Study

Name: Azan Shah

Track: General AI Fluency

Capstone: FL — Keep It Growing

Week: 6

1. How I Will Add My Next Case Study

I will add my next case study to the **Projects/Work section of my portfolio**, using the same structure as my existing case studies.

Each new case study will follow three simple beats:

1. Problem

I will explain:

- What problem or task I was working on.
- Why the problem mattered.
- Who the work was intended to help.
- What the starting situation was.

I will keep this section focused on the actual problem rather than giving unnecessary background.

2. What I Did

I will describe the important work I personally completed.

This will include:

- The approach I took.
- Tools and technologies I used.
- Important decisions I made.
- Problems I encountered and how I handled them.
- Where AI helped and where I made the final decisions myself.

I will use real screenshots, code examples, or other evidence where useful instead of making generic claims.

3. What Came of It

I will finish with the outcome of the work.

Where possible, I will include:

- Measured results.
- Improvements or observations.
- What I learned.
- Limitations of the result.
- What I would improve next.

I will avoid unsupported claims and clearly distinguish between measured results, observations, and future plans.

2. Steps I Will Follow

When I have a new project or meaningful piece of work, I will:

1. **Choose the work** that adds something new to my portfolio.
 2. **Collect evidence** such as screenshots, results, GitHub commits, or demos.
 3. **Write the Problem** in a few clear paragraphs.
 4. **Write What I Did**, focusing on my decisions and contribution.
 5. **Write What Came of It**, using real results where available.
 6. **Edit the case study** to remove generic AI wording and unnecessary details.
 7. **Add relevant screenshots** that prove the work.
 8. **Keep the same visual identity** from my existing portfolio.
 9. **Add the case study to the Projects/Work section.**
 10. **Check the live portfolio** on desktop and mobile before considering it complete.
-

3. My Next Case Study

Next Piece of Work: FlyRank Machine Learning Internship — Content Opportunity / Baseline Action Scoring

My next case study will be based on my **FlyRank Machine Learning internship work**, particularly the work where I built a baseline action-scoring approach for identifying content opportunities.

The case study will focus on how I moved from raw content/search-performance data to a simple decision-support queue.

Problem

The case study will explain the challenge of identifying content pages that may deserve attention based on measurable search-performance signals.

What I Did

I will describe how I:

- Framed the problem as an ML/data problem.
- Defined the unit of analysis and data contract.
- Worked with search-performance data.
- Investigated signals such as impressions, CTR, and position.
- Built a baseline scoring rule.
- Assigned reason codes and actions.
- Reviewed the highest-ranked recommendations critically.
- Checked for leakage and avoided future or label-derived information.

What Came of It

I will document the actual measured results from the internship work, including the baseline's behavior and limitations.

I will also explain that the baseline is **decision-support**, not proof that changing a page will definitely improve its performance.

4. Where the Case Study Will Go

The case study will be added to my portfolio's **Projects/Work section**.

The structure will be:

Project title → Short summary → Problem → What I Did → What Came of It → Evidence → Technologies → GitHub/Demo

I will keep the page visually consistent with the existing portfolio rather than creating a completely different design for each project.

5. Reminder

I will set a reminder to add the case study after completing the relevant internship work.

Reminder

Title: Add FlyRank ML Case Study to Portfolio

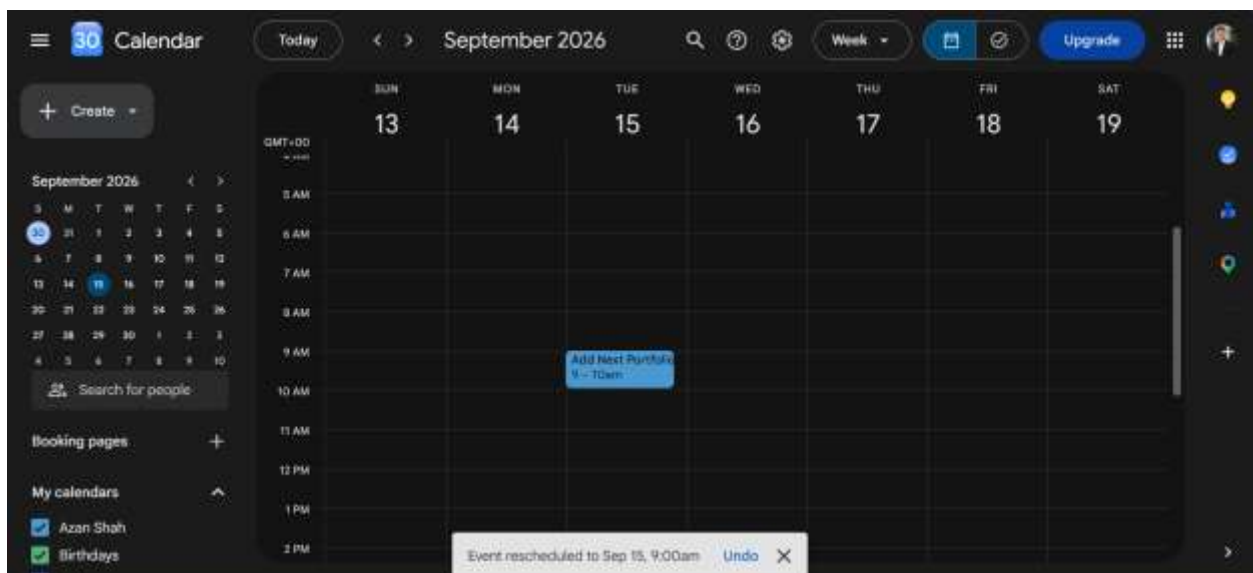

Action:

Review the completed FlyRank work, collect evidence, write the three-beat case study, and publish it to the portfolio.

Frequency: One-time reminder after the relevant internship work is complete.

Evidence:

I will submit a screenshot of the calendar/reminder showing the reminder title and scheduled date.

6. Keeping My Build Context

I will keep my **Claude Project** rather than starting from scratch for every future case study.

The project will retain:

- My preferred writing voice.
- My portfolio identity and visual direction.
- My technology stack.
- My case-study structure.
- My existing portfolio context.
- My identity kit and style decisions.

For the next case, I can therefore give the AI the new project evidence and have it help me interview, organize, and draft the case without rebuilding the portfolio context.

I will still review and edit the final writing myself so that the case study represents my actual work and decisions.
